

CORRECTIONAL FACILITY COATINGS

PROTECT YOUR FLOORS AND WALLS WITH STRATASHIELD® COATINGS

StrataShield coatings from Tnemec are ideal for the many unique conditions within correctional facilities, including heavy traffic, constant use, difficult maintenance, required cleaning and safety issues in confined areas.

Tnemec's high-build, high-performance coating systems protect floors and walls that not only look better for longer, but are easier to keep clean. They are also less likely to chip, peel, crack or blister, so recoating will become less frequent. This means less downtime in areas that must remain accessible and usable during maintenance.

Our extensive color palette allows the selection of colors that are most conducive to a positive psychological mood in a correctional environment. The many colors available can also be used to identify different functional areas in a facility.

Correctional facilities need coatings that perform. Cells, entry areas, command posts, recreation areas, bathrooms and showers, infirmaries, and visiting rooms should all be protected from these harsh environments. Tnemec's long history of consultations, hands-on fieldwork and custom-designed coating solutions has given us an unparalleled technical expertise. We have the products and the knowledge to help protect your facility.

FEATURES AND BENEFITS

- Abrasion and stain resistant
- Easy to clean and maintain
- Quick return-to-service
- Smooth, orange-peel and non-slip finishes
- Available in a wide range of colors
